

## WHY CATS ARE SUPERIOR TO HUMANS

### Cats (Felis Catus)

### Humans (Homo Sapiens)

#### Agility

*~Need we say more?*

#### Brain Power

*Use maximum neurological capacity!*

#### Anatomy

*Four Legs...and feet that act as hands!*

#### Psychology

*Satisfied with the simple pleasures!*

#### Social Dynamics

*Content with being alone or the occasional Skirmish with the next door neighbor*

#### Spirituality

*“and no religion too”*

#### Agility

*~Try and Catch ‘Em!*

#### Brain Power

*Excessive vascular presence fosters dangerous environment for hemorrhages and clots!*

#### Anatomy

*Only 2 legs and vulnerable vertebrae design!*

#### Psychology

*In constant turmoil and need for self-affirming exercises. Litigious activity costs billions that could be better spent on cat toys!*

#### Social Dynamics

*Tend to congregate in large groups waving their arms in senseless displays of hysteria.*

#### Spirituality

*Supplicate to peaceful, imaginary entities while worshipping violent video games!*

## Environmental Impact

*A natural deterrent to unsightly creatures!*

## Cosmetic Attributes

*Coated with luxuriant epidermal pelage.  
Beautifully contoured, purrfect  
shnozzolas...every last one of 'em!*

## Balance

*Inclusion of tail offers exceptional aid  
toward ability to 'walk the plank.' In  
event of a fall, cat invariably lands on  
'all fours' without a fuss or visit to the  
emergency room!*

## Auditory Kinetics and Capacities

*Ability to move ears independently in  
circular motions well over 180 degrees.  
Can hear just about anything and  
everything, with ranges far beyond the  
human threshold!*

## Sanitation

*Wondrous ability to swing back leg  
behind neck and twist head toward anal  
cavity. Exceptional sandpaper 'papillae'  
tongue enables the cleansing of fecal and  
other excreta with no environmental  
impact!*

## Environmental Impact

*%&!!@#^%\$#& \*% \* & ^%\$#@% ^\$\$#*

## Cosmetic Attributes

*Come with spotty splotches of body hair...  
Obsessed with muscle makeup. Known to  
savage parts of the body for vanity  
projects...Propensity for nose jobs!*

## Balance

*Vestigial tail bone indicates evolutionary  
error. Tendency to fall is marked by  
serious medical consequences especially in  
older specimens. Lack of tail probably  
accounts for billions of dollars in excessive  
hospital expenses!*

## Auditory Kinetics and Capacities

*Ear wiggling relegated to tricksters and  
clowns. Loses ability to hear higher  
frequencies beginning in young  
adulthood... problem particularly  
prevalent in male homo sapiens!*

## Sanitation

*Inability to lick one's own arse leads to  
habitual use of paper products for that  
'soft swipe'...subjecting the earth to  
devastating deforestation. Compulsive need  
to shower and bathe compromises water  
supply. Known to litter streets, parks and  
even beaches with vast quantities of  
rubbish and trash!*

**< The Winner!**

*~by unanimous decision~*
